INVITATION TO BID BID NO. 3733 CIPP SEWER LINING SERVICES

Sealed bids will be accepted at the City Clerk's Office, City Hall, 333 West Ellsworth Street, Midland, Michigan 48640-5132, until 2:00 PM, Tuesday, **October 20, 2015** for the Lining of Sewer Pipe using the CIPP process per the attached specifications. Technical questions about this bid shall be directed to Steve Smith, WWTP Supervisor, at (989) 837-3504.

A mandatory pre-bid meeting will be held at the Wastewater Plant on Tuesday, October 13th beginning at 9:00 AM.

Invitation to Bid and all its pages, documents and attachments, including those added subsequently by written notice, submitted and properly executed, shall constitute the contract between the City of Midland and the successful vendor when approved and accepted by the City.

The City reserves the right to accept or reject all or any parts of any and all bids, to waive irregularities and to award in the best interests of the City of Midland.

Mike Meyer, CPPB, K.P.M

Purchasing Agent Midland, Michigan

CITY OF MIDLAND TRENCHLESS RECONSTRUCTION OF CONCRETE SANITARY SEWER ON SWEDE AVENUE

INTENT

It is the intent of this specification to provide for the reconstruction of concrete sanitary sewer by the installation of a resin-impregnated flexible tube, which is formed to the original conduit by use of a hydrostatic head. The resin is cured using hot water under hydrostatic pressure within the tube or steam. The Cured-In-Place Pipe (CIPP) will be continuous and tight fitting. The work shall be completed within 60 calendar days from the "Notice to Proceed". There will be a mandatory Pre Bid meeting to attend October 13th at 9:00 am, at the Wastewater Treatment Plant, at 2125 Austin, Midland, MI 48642.

1.1 SCOPE OF WORK

- 1.2 Install approximately 1425' of 42" diameter liner, installed through six continuous sections of sanitary sewer. Install approximately 1700' of 36" diameter liner, installed through six continuous sections of sanitary sewer. Install approximately 1000' of 10" sanitary sewer if budget allows.
- 1.3
- a. Price to include cleaning prior to installation.
- b. Price to include internal TV inspection prior to, and after installation.
- c. Price to include bypass of sewage during installation.
- d. Price to include trimming of up to ten protruding laterals.
- e. Price to include any repair of damage done to street or yards caused by contractor.

2. REFERENCED DOCUMENTS

2.1 This specification references ASTM F1216 (Rehabilitation of pipelines by the inversion and curing of a resin-impregnated tube), ASTM F1743 (Rehabilitation of pipelines by pulled-in-place installation of a cured-in-place thermosetting resin pipe), and ASTM D790 (Test methods for flexural properties of non-reinforced plastics) which are made a part hereof by such reference and shall be the latest edition and revision thereof. In case of conflicting requirements between this specification and these referenced documents, this specification will govern.

3. PRODUCT, MANUFACTURER/INSTALLER QUALIFICATION REQUIREMENTS

3.1 Since sewer products are intended to have a 50-year design life, and in order to minimize the Owner's risk, only proven products with substantial successful long term track records will be approved. All trenchless rehabilitation products and installers must be pre-approved prior to the formal opening of proposals.

Products and Installers seeking approval must meet all of the following criteria to be deemed Commercially Acceptable:

- 3.1.1. For a Product to be considered Commercially Proven, a minimum of 1,000,000 linear feet or 4,000 manhole-to-manhole line sections of successful wastewater collection system installations in the U.S. must be documented to the satisfaction of the Owner to assure commercial viability.
- 3.1.2 For an Installer to be considered as Commercially Proven, the Installer must satisfy all insurance, financial, and bonding requirements of the Owner, and must have had at least 5 (five) years active experience in the commercial installation of the product bid. In addition, the Installer must have successfully installed at least 50,000 feet of the product bid in wastewater collection systems. Acceptable documentation of these minimum installations must be submitted to the Owner.
- 3.1.3 Sewer Rehabilitation products submitted for approval must provide Third Party Test Results supporting the long term performance and structural strength of the product and such data shall be satisfactory to the Owner. Test samples shall be prepared so as to simulate installation methods and trauma of the product. No product will be approved without independent third party testing verification.
- 3.1.4 Both the rehabilitation manufacturing and installation processes shall operate under a quality management system that is third party certified to ISO 9000 or other internationally recognized organization standards. Proof of certification shall be required for approval.
- 3.1.5 Proposals must be labeled clearly on the outside of the proposal envelope, listing the product name and installer being proposed. Only proposals using preapproved products and installers will be opened and read. Proposals submitted on products and/or from installers that have not been pre-approved will be returned unopened.

Documentation for products and installers seeking pre-approved status must be submitted no less than 2 weeks prior to proposal due date to allow time for adequate consideration. The Owner will advise of acceptance or rejection a minimum of three days prior to the due date. All required submittals must be satisfactory to the Owner.

4. SUBMITTALS

- 4.1 Conceptual designs for lining wall thickness and finished inside diameter shall be submitted with the Contractor's bid proposal form.
- 4.2 The final design for the lining shall be submitted to the Owner for approval 14 Days prior to installation. The design calculations shall show technical assumptions, identify the design formulas used, and show the wall thickness and finished inside diameter. The final ovality condition used in the calculations shall be identified.

The engineering design shall graphically illustrate the installation conditions (i.e., depth of pipeline, water table, pipe invert and crown, and full details of the parameters used). The design shall bear the seal and signature of a professional engineer.

- 4.3 The following information shall be submitted to the Owner 7 Days prior to commencing Work:
 - a) A work plan outlining the schedule, procedures, and work site.
 - b) A list of personnel, including backup personnel, with their qualifications and experience.
 - c) Safety plan, including the company safety manual and emergency procedures.
 - Product by-pass or temporary supply system plans, including methods, with a list of equipment to be used.
 - f) Manufacturer's technical data containing complete information on:
 - i. Material composition, physical properties, and dimensions of the new product.
 - ii. Recommendations for transportation, handling, and storage.
 - iii. Repair of product damaged during installation.
 - iv. Installation and connection details.
 - v. Inversion pressures.
 - vi. Product curing procedures listing the curing temperature and duration, including cool down time for the product.
 - g) Contingency plans for the following potential conditions:
 - i. Damage to the existing service connections.
 - ii. Improper placement of the CIPP.
 - iii. Damage to the host pipe.
 - iv. CIPP's failure to achieve structural integrity.

5. MATERIALS

- 5.1 Tube The sewn Tube shall consist of one or more layers of absorbent non-woven felt fabric and meet the requirements of ASTM F1216 or ASTM F1743, Section 5. The tube shall be constructed to withstand installation pressures, have sufficient strength to bridge missing pipe, and stretch to fit irregular pipe sections.
 - 5.1.1 The wet out Tube shall have a uniform thickness that when compressed at installation pressures will meet or exceed the Design thickness.
 - 5.1.2 The Tube shall be sewn to a size that when installed will fightly fit the internal circumference and length of the original pipe. Allowance should be made for circumferential stretching during inversion. Overlapped layers of felt in longitudinal seams that cause lumps in the final product shall not be utilized.
 - 5.1.3 The outside layer of the Tube (before wet out) shall be coated with an impermeable, flexible membrane that will contain the resin and facilitate monitoring of resin saturation during the resin impregnation (wet out) procedure.
 - 5.1.4 The Tube shall be homogeneous across the entire wall thickness containing no intermediate or encapsulated electrometric layers. No material shall be included in the Tube that may cause delamination in the cured CIPP. No dry or unsaturated layers shall be evident.
 - 5.1.5 The wall color of the interior pipe surface of CIPP after installation shall be a light reflective color so that a clear detailed examination with closed circuit television inspection equipment may be made.

- 5.1.6 Seams in the Tube shall be stronger than the non-seamed felt.
- 5.1.7 The Contractor shall confirm the exact size and length of all existing pipes to be rehabilitated prior to undertaking the manufacturing of any tubes.
- Resin The resin system shall be a corrosion resistant polyester, vinyl ester, or epoxy and catalyst system that when properly cured within the tube composite meets the requirements of ASTM F1216 and ASTM F1743, the physical properties herein, and those that are to be utilized in the Design of the CIPP for this project. The resin shall produce CIPP, which will comply with the structural and chemical resistance requirements of this specification.

6. STRUCTURAL REQUIREMENTS

- 6.1 The CIPP shall be designed as per ASTM F1216, Appendix X.1. The CIPP design shall assume no bonding to the original pipe wall.
- 6.2 The Contractor must have performed long-term testing for flexural creep of the CIPP pipe material installed by his Company. Such testing results are to be used to determine the Long-term, time dependent flexural modulus to be utilized in the product design. This is a performance test of the materials (Tube and Resin) and general workmanship of the installation and curing. A percentage of the instantaneous flexural modulus value (as measured by ASTM D-790 testing) will be used in design calculations for external buckling. The percentage, or the long-term creep retention value utilized, will be verified by this testing. Values in excess of 50% will not be applied unless substantiated by qualified third party test data. The materials utilized for the contracted project shall be of a quality equal to or better than the materials used in the long-term test with respect to the initial flexural modulus used in Design.
- 6.3 The Enhancement Factor 'K' to be used in 'Partially Deteriorated' Design conditions shall be assigned a value of 7. Application of Enhancement (K) Factors in excess of 7 shall be substantiated through independent test data.
- The layers of the cured CIPP shall be uniformly bonded. It shall not be possible to separate any two layers with a probe or point of a knife blade so that the layers separate cleanly or the probe or knife blade moves freely between the layers. If separations of the layers occur during testing of field samples, new samples will be cut from the work. Any reoccurrence may cause rejection of the work.
- 6.5 The cured pipe material (CIPP) shall conform to the structural properties, as listed below.

MINIMUM PHYSICAL PROPERTIES

| <u>Property</u> | <u>Test Method</u> | <u>Minimum Value</u> |
|---------------------------|-------------------------|----------------------|
| Initial Flexural Modulus | ASTM D-790 (short term) | 400,000 psi |
| initial Flexural Strength | ASTM D-790 | 4,500 psi |

6.6 The required structural CIPP wall thickness shall be based as a minimum, on the physical properties in Section 5.5 and in accordance with the Design Equations in the appendix of ASTM F 1216, and the following design parameters:

DESIGN CRITERIA

| Safety Factor | 2.0 |
|--|--------------------|
| Long Term Flexural Modulus Retention Factor (*See Paragraph 5.2) | 50% |
| Ovality (Unless otherwise verified during prelining inspection) | 2% |
| Enhancement Factor, k (See Paragraph 5.3) | 7 |
| Groundwater Depth | Half of Pipe Depth |
| Soil Modulus | 1500 psi |
| Soil Density | 110 pcf |
| Live Load | H-20 |

- Refer to the attached table for specific pipe section design criteria including pipe condition, depth, etc.
- Any layers of the tube that are not saturated with resin prior to insertion into the existing pipe shall not be included in the structural CIPP wall thickness computation.

7. TESTING REQUIREMENTS

- 7.1 Chemical Resistance The CIPP shall meet the chemical resistance requirements of ASTM F1216, Appendix X2. CIPP samples for testing shall be of tube and resin system similar to that proposed for actual construction. It is required that CIPP samples with and without plastic coating meet these chemical testing requirements.
- 7.2 Hydraulic Capacity Overall, the hydraulic profile shall be maintained as large as possible. The CIPP shall have a minimum of the full flow capacity of the original pipe before rehabilitation. Calculated capacities may be derived using a commonly accepted roughness coefficient for the existing pipe material taking into consideration its age and condition.
- 7.3 CIPP Field Samples When requested by the City, the Contractor shall submit test results from field installations in the USA of the same resin system and tube materials as proposed for the actual installation. These test results must verify that the CIPP physical properties specified in Section 5.5 have been achieved in previous field applications. Samples for this project shall be made and tested as described in Section 10.1.

8. INSTALLATION RESPONSIBILITIES FOR INCIDENTAL ITEMS

8.1 It shall be the responsibility of the City to locate and designate all manhole access points open and accessible for the work, and provide rights of access to these points. If a street must be closed to traffic because of the orientation of the sewer, the City shall institute the actions necessary to do this for the mutually agreed time period. The City

- will also provide access to water hydrants for cleaning, inversion and other work items requiring water. Contractor shall provide an approved double check valve backflow preventer at all hydrant connections.
- 8.2 Cleaning of Sewer Lines The Contractor, when required, shall remove all internal debris out of the sewer line that will interfere with the installation of CIPP. The City will also provide a dumpsite for all debris removed from the sewers during the cleaning operation. Unless stated otherwise, it is assumed this site will be at the City Landfill
- 8.3 Bypassing Sewage The Contractor, when required, shall provide for the flow of sewage around the section or sections of pipe designated for repair. The bypass shall be made by plugging the line at an existing upstream manhole and pumping the flow into a downstream manhole or adjacent system. The pump and bypass lines shall be of adequate capacity and size to handle the flow. Contractor shall have a backup pump and power supply at all bypasses. The City may require a detail of the bypass plan to be submitted.
- Inspection of Pipelines Inspection of pipelines shall be performed by experienced personnel trained in locating breaks, obstacles and service connections by close circuit television. The interior of the pipeline shall be carefully inspected to determine the location of any conditions that may prevent proper installation of CIPP into the pipelines, and it shall be noted so that these conditions can be corrected. The Contractor shall submit to the City a videotape and suitable log for later reference.
 - 8.4.1 After completion of the preparation of a pipeline section, a video inspection of the full length of the pipeline section shall be made and submitted to the City. Prior to the delivery of the service interruption notice and any lining installation taking place, approval of the prepared section shall be obtained from the City.
 - 8.4.2 After completion of all work required for the lining of the pipeline section, a video inspection of the full length of the pipeline section shall be made and submitted to the City for approval of the work.
- 8.5 Line Obstructions It shall be the responsibility of the Contractor to clear the line of obstructions such as solids and roots that will prevent the insertion of CIPP.
- 8.6 Public Notification The Contractor shall make every effort to maintain service usage throughout the duration of the project. In the event that a service will be out of service, the maximum amount of time of no service shall be 8 hours for any property served by the sewer. A public notification program shall be implemented, and shall as a minimum, require the Contractor to be responsible for contacting each home or business connected to the sanitary sewer and informing them of the work to be conducted, and when the sewer will be off-line. The contractor shall also provide the following:
 - 8.6.1 Written notice to be delivered to each home or business the day prior to the beginning of work being conducted on the section, and a local telephone number of the Contractor they can call to discuss the project or any problems that could arise.
 - 8.6.2 Personal contact with any home or business, which cannot be reconnected within the time stated in the written notice.

- 8.7 The Contractor shall be responsible for confirming the locations of all branch service connections prior to installing and curing the CIPP and reinstatement.
- 8.8 If the pre-installation inspection reveals an obstruction such as a protruding service connection, a dropped joint, or a collapse that prevents the lining process and it cannot be removed by conventional sewer cleaning equipment, then the Contractor shall attempt a trenchless technique to remove or repair the obstruction. Any necessary additional work shall be approved in writing by the City prior to the commencement of the work.
- 8.9 When the filling of voids is necessary to ensure structural integrity of the pipeline and to prevent bridging of the liner, the Contractor shall submit a detailed procedure outlining the process and materials to be used to fill the voids to the City for approval.

INSTALLATION

- 9.1 CIPP installation shall be in accordance with ASTM F1216, Section 7, or ASTM F1743, Section 6, with the following modifications:
 - 9.1.1 Resin Impregnation The quantity of resin used for tube impregnation shall be sufficient to fill the volume of air voids in the tube with additional allowances for polymerization shrinkage and the loss of resin through cracks and irregularities in the original pipe wall. A vacuum impregnation process shall be used.
 - 9.1.2 Tube Insertion The wet out tube shall be positioned in the pipeline using either inversion or a pull-in method. If pulled into place, a power winch should be utilized and care should be exercised not to damage the tube as a result of pull-in friction. The tube should be pulled-in or inverted through an existing manhole or approved access point and fully extend to the next designated manhole or termination point. Removal of manhole casting for insertion shall be at contractor's expense.
 - 9.1.3 Temperature gauges shall be placed inside the tube at the invert level of each end to monitor the temperatures during the cure cycle.
 - 9.1.4 Curing shall be accomplished by utilizing hot water under hydrostatic pressure in accordance with the manufacturer's recommended cure schedule.

10. REINSTATEMENT OF BRANCH CONNECTIONS

10.1 It is the intent of these specifications that branch connections to buildings be reopened without excavation, utilizing a remote controlled cutting device, monitored by a video TV camera. The Contractor shall certify he has a minimum of 2 complete working cutters plus spare key components on the site before each inversion. Unless otherwise directed by the owner or his authorized representative, all laterals will be reinstated. No additional payment will be made for excavations for the purpose of reopening connections and the Contractor will be responsible for all costs and liability associated with such excavation and restoration work.

11. INSPECTION

- 11.1 CIPP samples shall be prepared and physical properties tested in accordance with ASTM F1216 or ASTM F1743, Section 8, using either method proposed. The flexural properties must meet or exceed the values listed in Table 1 of the applicable ASTM.
- 11.2 Wall thickness of samples shall be determined as described in paragraph 8.1.6 of ASTM F1743. The minimum wall thickness at any point shall not be less than 87 ½% of the design thickness as calculated in paragraph 5.6 of this document.
- 11.3 Visual inspection of the CIPP shall be in accordance with ASTM F1743, Section 8.6.

12. CLEAN-UP

12.1 Upon acceptance of the installation work and testing, the Contractor shall restore the project area affected by the operations to a condition at least equal to that existing prior to the work.

13. PAYMENT

13.1 Payment for the work included in this section will be in accordance with the prices set forth in the proposal for the quantity of work performed.

CITY OF MIDLAND, MICHIGAN STANDARD INSTRUCTIONS TO BIDDERS

- 1. Receipt and Opening of Bids: Sealed bids will be accepted and date/time stamped upon receipt in the office of the City Clerk, City Hall, 333 West Eilsworth, Midland, MI 48640-5132, until the time indicated on the attached Invitation to Bid for goods or services listed in the specifications and will be publicly opened and read aloud.
- 2. <u>Form of Bid</u>: Bids shall be submitted on the enclosed form with any exceptions, deviations or modifications to the published requirements clearly noted and explained.

3. Submission of Bids:

- A) Envelopes containing bids shall be sealed and clearly marked on the outside of the envelope with the name and address of the bidder, the title and bid number of the project, and the date and time of the scheduled bid opening.
- B) Any bid received after the scheduled opening time will not be accepted and will be returned unopened.
- C) Any bidder may withdraw their bid response by written request at any time prior to the scheduled bid opening.
- D) Telephonic or faxed bids will <u>not</u> be accepted and telephonic, telegraphic, or faxed amendments to bids or withdrawals will <u>not</u> be accepted under any circumstances.
- E) Unless otherwise specified, no bid may be withdrawn, changed, or modified in any way for a period of sixty (60) calendar days from the date of the bid opening.
- F) Negligence on the part of the bidder in preparing the bid confers no rights for the withdrawal of the bid after opening.
- G) Bids received prior to the time of bid opening will be securely kept unopened. No responsibility will attach to any officer or employee of the City for the premature opening of c bid not properly addressed or identified.
- H) In case of a discrepancy between unit prices and their extensions, the unit price bid shall govern.
- 4. <u>Brand Names:</u> Wherever in the specifications or proposal form brand names, trade names, manufacturer, or catalog numbers are called, it is for establishing a grade or quality level only and the phrase "or equal" is deemed to follow unless a prequalified list or the term "only", "no exceptions", or similar phrase is included.
- 5. <u>Taxes:</u> The City of Midland is exempt from State and Federal taxes. However, property purchased by a contractor to be used in the construction, alteration, repair, or improvement of property owned by the City is taxable to the contractor. Therefore, the price bid for contracts other than construction contracts must be exclusive of taxes and will be so construed. Construction contracts will be construed to include all applicable taxes unless the contract specifies otherwise.
- 6. Acceptance of Bids: The City will award to the lowest, responsive, responsible vendor that meets the functional requirements and needs expressed by the specifications. Tie bids will be awarded based on the most favorable terms for payment and/or delivery schedule or other costs associated with the award process. Receipt of a purchase order or properly executed contract covering the materials or services as described in the bid will indicate the award of bid and contract of purchase.
- 7. <u>City's Rights:</u> The City reserves the right to accept or reject any or all bids, to waive irregularities or defects, to award on a split-order or lump-sum basis, and accept other than the low bid when deemed to be in the City's best interests.
- 8. Delivery: Bids shall include all delivery charges with terms of Freight Prepay FOB Midland, MI.
- 9. <u>Laws:</u> The laws of the State of Michigan shall govern the rights, obligations, and remedies of the Parties under this bid and any agreement reached through this process. The City of Midland is a Michigan municipal corporation.
- 10. <u>Disclosure:</u> All of the information included in your bid response is subject to the "Freedom of Information Act" and may be disclosed in its entirety after the formal, public bid opening has been completed. Bid tabulations will be available at on the City's website, www.cityofmidlandmi.gov in the Purchasing section of the Fiscal Services Department under the City Government tab.
- 11. <u>Independent Price Determination:</u> By submission of this proposal, the bidder certifies that the pricing structure offered has been arrived at independently without consultation, communication, or agreement of such prices for the purpose of restricting competition with any other bidder or competitor.
- 12. Acceptance of Materials: All components used in the manufacture or construction of materials, supplies, and equipment, and all finished goods, shall be new, the latest make/model, of the best quality, and highest grade workmanship. In the event the delivered material is found to be defective or does not conform to specifications, the City reserves the right to cancel the order upon written notice to the bidder and return the materials to the bidder at the bidder's expense.
- 13. Non-Iran Linked Business: By signing below, I certify and agree on behalf of myself and the company submitting this proposal the following: (1) that I am duly authorized to legally bind the company submitting this proposal; and (2) that the company submitting this proposal is not an "Iran linked business," as that term is defined in Section 2(e) of the Iran Economic Sanctions Act, being Michigan Public Act No. 517 of 2012; and (3) That I and the company submitting this proposal will immediately comply with any further certifications or information submissions requested by the City in this regard."

CITY OF MIDLAND, MICHIGAN SPECIAL PROVISIONS FOR CONSTRUCTION WORK

1. <u>Confined Space Entry Obligations:</u>

- b) All contractors and sub-contractors conducting permit-required confined space entry shall have a written permit-required space program meeting the requirements of the Michigan Occupational Safety and Health Administration (MIOSHA) General Industry Safety Standards Commission, Part 90. Confined Space Entry; and Occupational Health Standards Commission, Part 490. Permit-Required Confined Spaces, as well as current confined space entry team training documentation and a rescue plan. Contractors shall provide written proof of that program, training records and rescue plan upon request, before the bid is awarded or at any time after the bid is awarded.
- b.) Contractors shall comply with all MIOSHA confined space standards and all other regulations concerning confined space entry at all times.
- c) The City of Midland is in compliance with all MIOSHA standards pertaining to confined space entry. A copy of the City of Midland Master Plan for Permit-Required Confined Space Entry can be obtained from the Human Resources Department in City Hall, 333 West Ellsworth, Midland, Michigan 48640.

2. Liquidated Damages:

- a) If the contractor fails to finish the project prior to the completion date established in the contract including approved extensions, liquidated damages will be charged for each calendar day that the work remains incomplete. If no completion date is listed in the specifications, this clause will be null and void.
- b) The amount of liquidated damages will be deducted from the money due the contractor prior to final payment or in the case where the remaining amount due is less than the total amount of liquidated damages, the City shall have the right to recover the difference from the contractor or the contractor's surety.
- c) Unless specifically amended or modified by the bid specifications, the schedule for liquidated damages shall be as follows:

CONTRACT AMOUNT

| FROM | <u>TO</u> | LIQUIDATED DAMAGES |
|-----------|-----------|------------------------|
| \$0 | \$50,000 | \$100 per calendar day |
| \$50,001 | \$100,000 | \$200 per calendar day |
| \$100,001 | \$500,000 | \$300 per calendar day |
| \$500,001 | and up | \$400 per calendar day |

d) The amounts set forth in the above schedule are not to be considered punitive, but rather predetermined and reasonable amounts to compensate for the detriment to the public and to defray expenses incurred by the City due to delay in the completion of the project.

Bid Security:

- a) A bid security, as a guarantee of good faith, in the form of a certified check, cashier's check, or bidder's bond may be required to be submitted for this project as indicated on the bid response form.
- b) If alternate bids are being proposed, only one bid security will be required in the amount of the highest proposed total bid.

- c) Such bid security will be returned to the unsuccessful bidders upon award of the bid and to the successful bidder upon approval by the City of the executed contract and any additional bonds required or to all bidders upon rejection of the bid in it's entirety by the City.
- d) Bid security shall be forfeited to the City as liquidated damages, not as a penalty, if the successful bidder fails or refuses to enter into a contract with the City according to the terms of the bid or fails to provide sufficient bonds and/or insurance certificates as required by the City and established in this specification document.

4. Insurance Certificate:

The successful vendor shall supply to the City prior to award an Insurance Certificate in the minimum amount prescribed below listing the City of Midland as "Additional Insured". All certificates of insurance shall be on the standard ACCORD CERTIFICATE OF INSURANCE form showing the specific limits of insurance required. The contractor shall not commence any work on this project until a valid form has been delivered to the City and has been approved by the City Attorney.

Commercial General Liability Insurance

The contractor shall procure and maintain during the life of this contract, Commercial General Liability Insurance on an occurrence basis with limits of liability not less than \$1,000,000 per occurrence and \$2,000,000 aggregate combined single limit, Personal Injury, Bodily Injury and Property Damage. Coverage shall include the following: a) contractual liability; b) products and completed operations; c) independent contractors; d) broad form general liability extensions or equivalent; e) per contract aggregate.

Automobile Liability

The contractor shall procure and maintain during the life of this contract, automobile liability insurance, including applicable No-Fault coverages, with limits of liability of not less than \$1,000,000 per occurrence combined single limit bodily injury and property damage. Coverage shall include all owned, non-owned, and hired vehicles.

Workers Compensation Liability Insurance

The contractor shall procure and maintain during the life of this contractor, Workers Compensation Insurance, including employers liability coverage in accordance with all applicable statues of the state of Michigan. Employer liability limits shall be at least \$500,000/\$500,000.

5. <u>Performance and Payment Bond</u>

The successful contractor shall furnish a performance bond in the amount of 100% of the contract price as security for the faithful performance of the project. The contractor shall also provide a payment bond in the amount of 100% of the contract price as security for payment of all persons or companies that supply materials and/or labor in connection with this project. Surety bonds shall be provided through firms that are listed as approved on the U.S. Treasury Department's Circular 570.

6. <u>Subcontractor Usage:</u>

The City has the right of approval on subcontractors used for any City project. The use of ineligible vendors as subcontractors may cause the main contractor to be placed on the City's list of ineligible vendors. The City does <u>not</u> pay subcontractors directly, that is the responsibility of the general. For a list of the City's ineligible vendors, contact the City Purchasing Agent.
